US SCROTUM & CONTENTS

Collected on June 26, 2024 2:13 PM

Results

COMPARISON: None available.

CLINICAL INFORMATION: Right testicular pain.

TECHNIQUE: Grayscale, color and pulsed Doppler images of the scrotal contents were obtained.

FINDINGS:

Right testicle: 4.6 x 2.4 x 3.4 cm. Volume 19.6 mL

normal morphology and echogenicity.

no focal lesions.

Normal arterial and venous flow with Doppler interrogation.

Right epididymis:

normal configuration

no focal lesions.

normal flow.

No right hydrocele.

right varicocele with veins measuring up to 6 mm with Valsalva.

Left testicle: 4.6 x 2.2 x 3.4 cm. Volume 18.3 mL

normal morphology and echogenicity.

no focal lesions.

Normal arterial and venous flow with Doppler interrogation.

Left epididymis:

normal configuration

0.4 cm epididymal head cyst

normal flow.

No left hydrocele.

left varicocele with veins measuring up to 4 mm with Valsalva.

IMPRESSION:

- No acute findings.
- Bilateral varicoceles.
- 0.4 cm left epididymal head cyst.
- Normal testicles.
